1) Foundational concepts

1. Business Analytics - Using data to make better decisions
2. Data Analytics - Hands on digging through data to find answers
3. Business Intelligence - Tools and dashboards like Power BI that show what is happening in the business in terms of trends
4. Data-driven decision making - Making a decision based on data not your gut.
5. Big Data - Massive data that is fast-moving or messy that spreadsheet tools can't
6. Descriptive analytics - Looking backwards. "What happened in the last quarter?"
7. Diagnostic analytics - Digging deeper into the past. "Why did sales drop last quarter?"
8. Predictive analytics - Looking forward using patterns. "Based on history what's likely to happen next?"
9. Prescriptive analytics - Takes prediction one step further. "Given what's likely to happen, what should you do?"
10. Data Literacy - The ability to read, understand and talk about data without being a data scientist.

2) Data Measurement and cerating

11. Structured data - Neat organised data that lives in rows and columns.
12. Unstructured data - Messy data with no fixed format - emails, videos, voice notes, social media posts.
13. Data Warehouse - Storage system (large) where a company dumps its data for analysts to query.
14. Data mining - Sifting through large amounts of data looking for hidden patterns.
15. Data visualization - Turning numbers into pictures e.g graphs, charts, maps so people can easily understand them.

16. Dashboard - Live screen showing your most important numbers right now.
17. Metric - Any number you're tracking
18. KPI - An important metric for your goal.
19. Benchmark - A reference number you compare yourself against.
20. Segmentation - Splitting your customers into groups based on shared traits - age, location, spending habits so you can treat them differently.

3.) Customer sales and KPI's

21. Conversion rate - out of people who showed up how many did what you wanted? Clicked, bought, signed up.
22. Customer acquisition cost - How much did you spend to get one new customer?
23. Customer lifetime value - How much will one customer bring in over time.
24. Churn rate - The percentage of customers who left or cancelled in a given period. High churn means you're losing customers faster than you're gaining them.
25. Customer retention rate - The flipside of churn
26. Net promoter score - How likely we are to be recommended
27. Average order value - On average how much does a customer spend per transaction?
28. Sales funnel - Customer journey till they pay

29. Marketing campaign - Planned push to promote something it might be a product, sale or brand.
30. Post campaign analysis - After the campaign ends you ask yourself what worked, what flopped.
31. Incremental revenue - The extra money the campaign specifically caused. Not total revenue.
32. Return on investment - Did you make more than you spent?
33. Return on Ad spend - Like ROI but for ads.
34. Click through rate - Percentage of people who clicked on your email.
35. Bounce rate - People who visited your website and left immediately.
36. A/B Testing - Running 2 versions of an ad to see which one performs better.
37 Lead generation - Attracting customers
38 Marketing attribution - Figuring out which touchpoint deserves credit for a sale.
